

Name:

Chemical Reaction Reading Questions

1. What happens in a chemical reaction?
2. How do new substances form in a chemical reaction?
3. What do scientists call a substance that forms during chemical reaction?
4. What side of the equation are reactants found?
5. Where is energy stored in chemical compounds?
6. How does the energy of the reactants and products differ in an endothermic reaction?
7. How does the energy of the reactants and products differ in an exothermic reaction?
8. How can products and reactants have different amounts of energy without violating the law of conservation of energy?
